Projects

Human Life Expectancy (death from cardiac arrest)

It's an ML project where a sample data of daily life (like food habits, medical conditions etc.) of quite a number of people are taken and from these the AI decides the life expectancy i.e death due to cardiac arrest of these people.

Athenaeum-An online class environment

This project has features such as a forum for notes, doubts sharing. A streaming platform for live classes. Assignment and examinations sections which will automatically get evaluated using some NLP machine learning
